

MISSION DERMATOLOGY - Consultation Letter

Date: 03/20/2026

RE: Maria Chen DOB: 04/12/1988

Dear Dr. Garcia,

Thank you for referring Ms. Chen. She has moderate-to-severe atopic dermatitis involving the antecubital and popliteal fossae, EASI 21, despite triamcinolone.

Allergies: Sulfa (rash)

Assessment/Plan:

1. Atopic dermatitis, moderate-severe (L20.9). Discontinue triamcinolone cream.
Start dupilumab 300 mg subcutaneous every 2 weeks after 600 mg loading dose.
2. Prior authorization submitted to Acme Health.

Hannah Lee, MD
